# What is Epson RTC module ?

Epson RTC module :

Crystal chip, Oscillator circuit and RTC IC are in one package

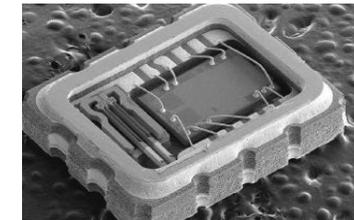

+

- ✓ Built-in Crystal chip
- ✓ Built-in capacitor
- ✓ Frequency adjusted

**Feature : Various functions for lower power consumption and higher system efficiency**

- Low current consumption (maintaining time)
- Highly accurate calendar management, temperature compensation function※
- Extensive features such as wake-up timer, alarm, time stamp, etc.
- Modularization reduces customer hassle
  - … Reduced mounting process, no circuit matching, no power switching circuit required, wide selection of batteries

**CE Package**

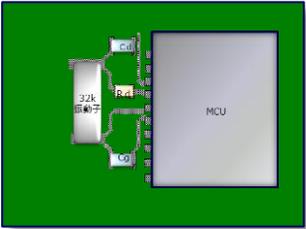

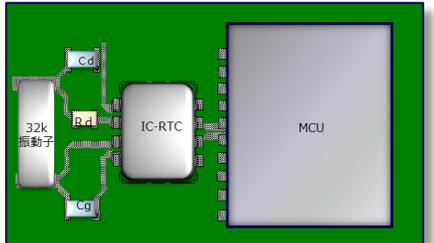

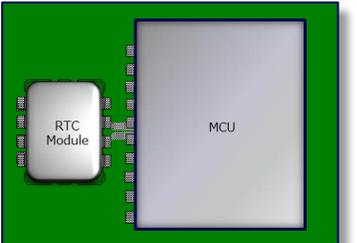

**Shipping Quantity : Around 100million pcs/year for various application**

- ◆ Automotive : Clock, BMS
- ◆ FA:PLC, CNC, Encoder, Robot, NC
- ◆ OA:MultiFunctionPrinter
- ◆ Consumer:DSC, HVAC, White goods, Lighting
- ◆ Others:Smart meter, Video surveillance system, ATM, Datacenter , Basestation

※Some products

# Comparison between RTC solutions

High accuracy, space saving, and high reliability make **RTC Modules** the best choice

	RTC solution	PCB Layout image	PCB space saving	Frequency adjustment	Lower current consumption	Ease in design
1	RTC in MCU +Crystal chip (external)		✓✓ • Crystal unit • Oscillator circuit	✓✓ • Accuracy adjustment by user	✓ ※1	✓ • Oscillator circuit design by user • Influenced by external environment※2 (Oscillator circuit mounted on board)
2	RTC IC +Crystal chip (external)		✓ • RTC IC • Crystal unit • Oscillator circuit	✓✓ • Accuracy adjustment by user	✓✓✓	✓ • Oscillator circuit design by user • Influenced by external environment※2 (Oscillator circuit mounted on board)
3	<b>RTC Module</b> Built-in Crystal		✓✓ • RTC module	✓✓✓ • No accuracy adjustment required • Temperature compensation (some products)	✓✓✓ Min. 100nA ※3	✓✓✓ • No oscillation circuit board design required • Minor influence of external environment※2 (Oscillator circuit encapsulated in PKG)

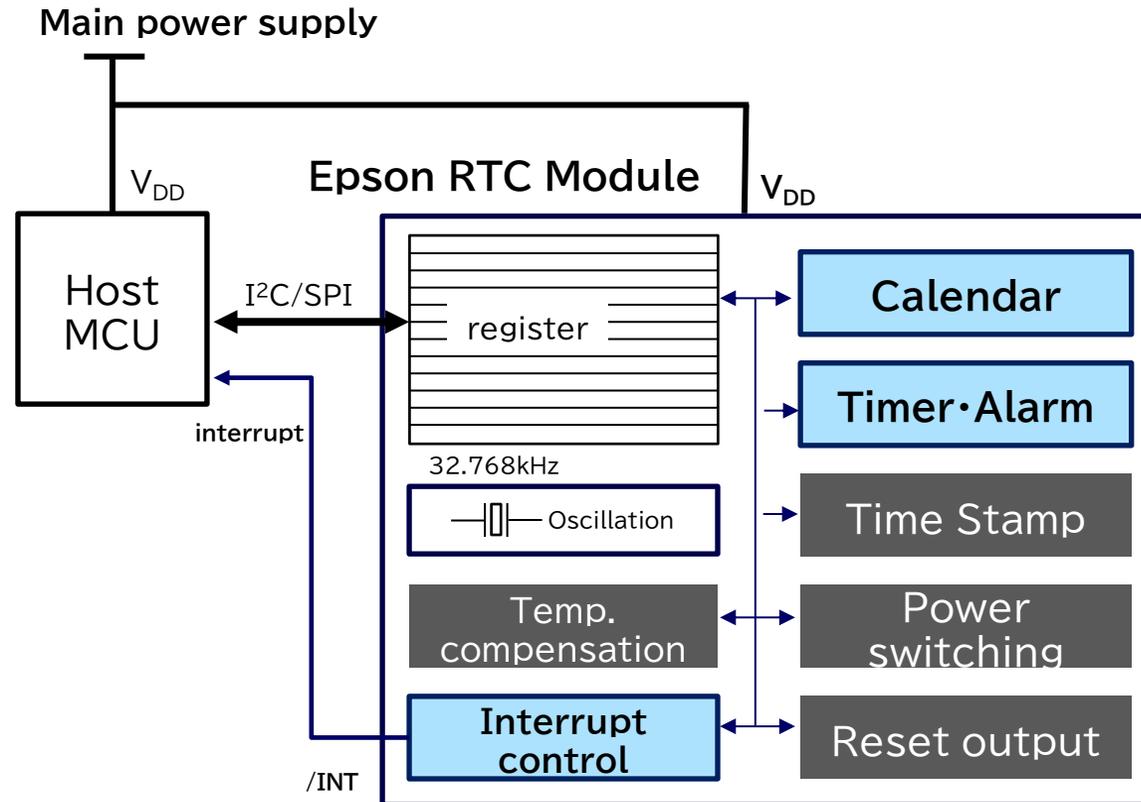

※1 : Assumes general product

※2 : Relative comparison

※3 : Spec is different by model

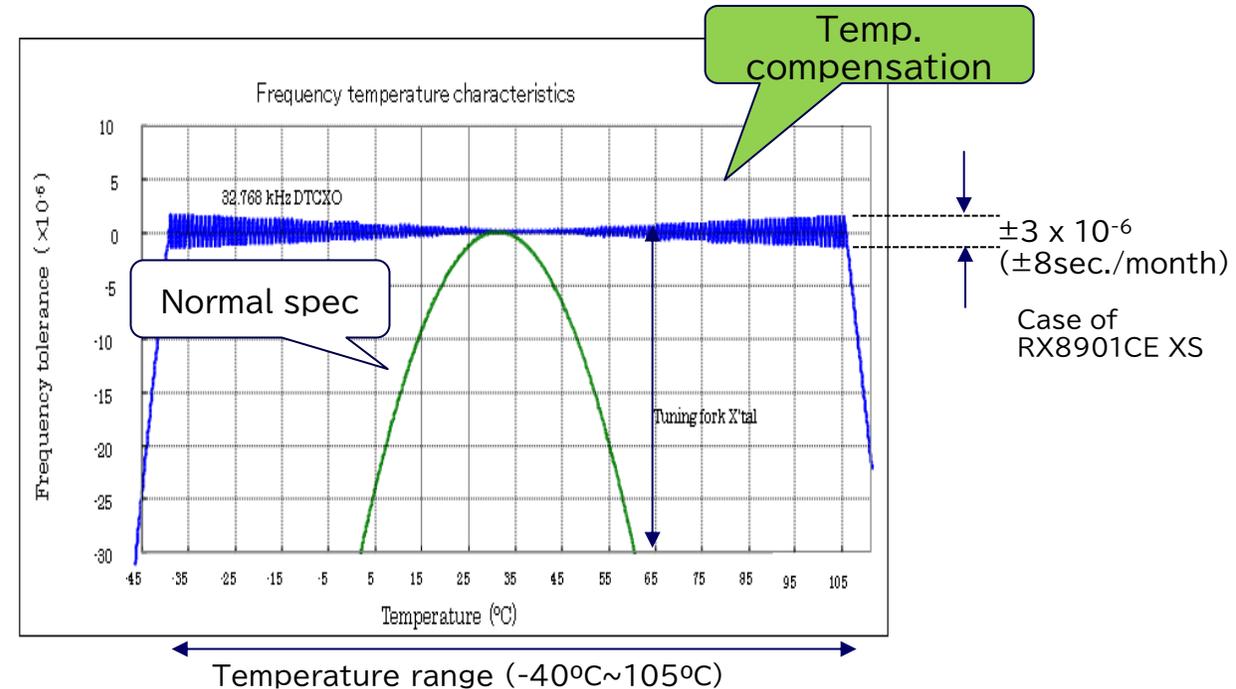

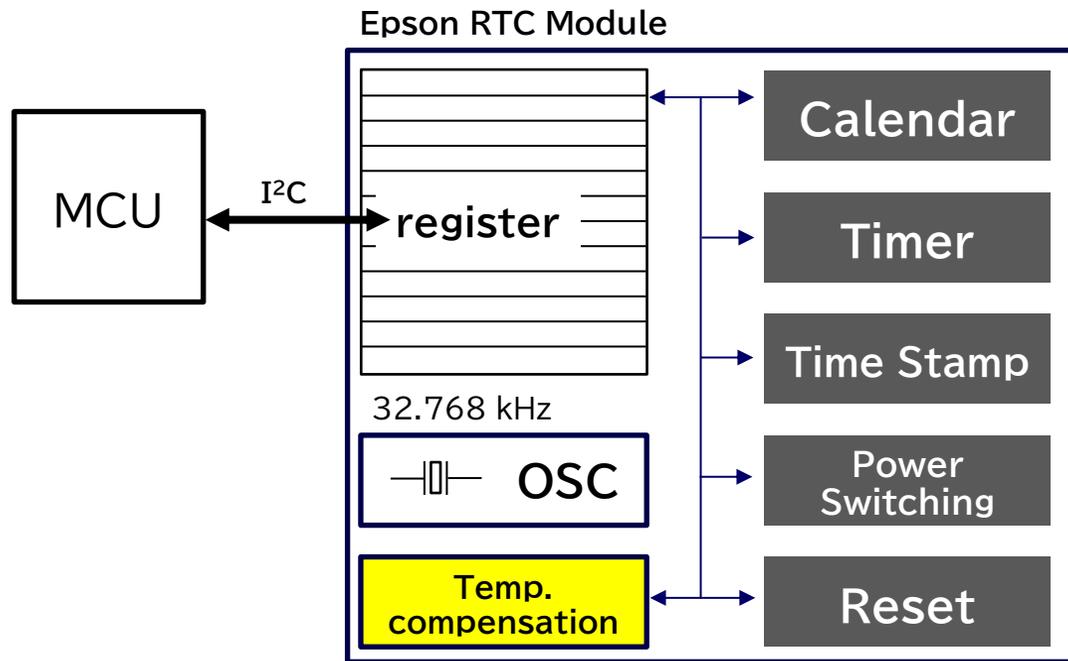

# Epson RTC module Functions

- ① **Calendar**      Clock continues counting while power is supplied
- ② **Alarm**      Generates an interrupt event at a specific date and time
- ③ **Wake up timer**      Generates an interrupt event after a specified interval of time

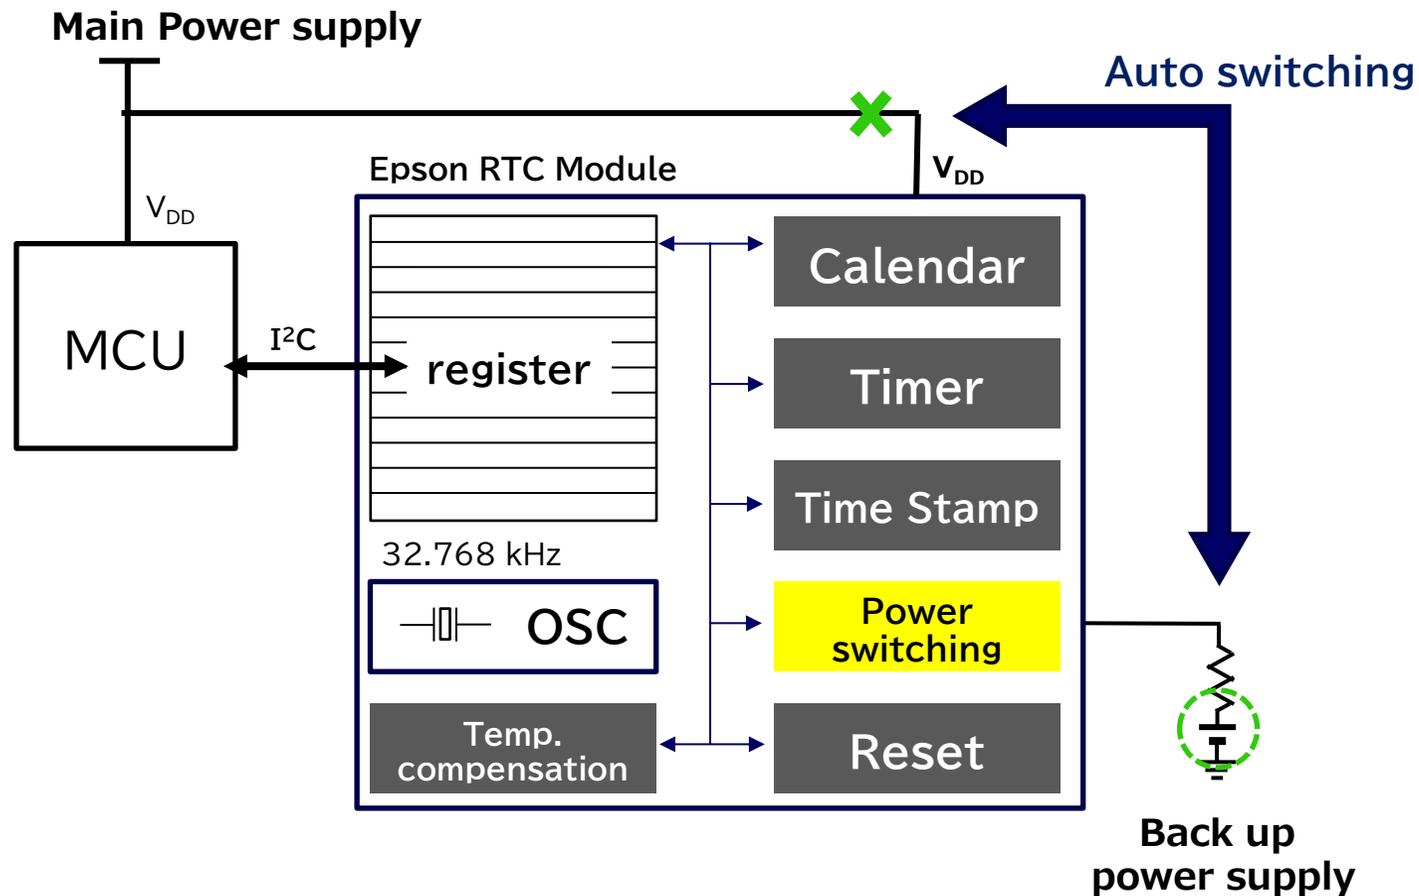

# Functions (2) Temperature compensation

Maintains accurate time through automatically compensating for changes in oscillation frequency caused by temperature fluctuations.

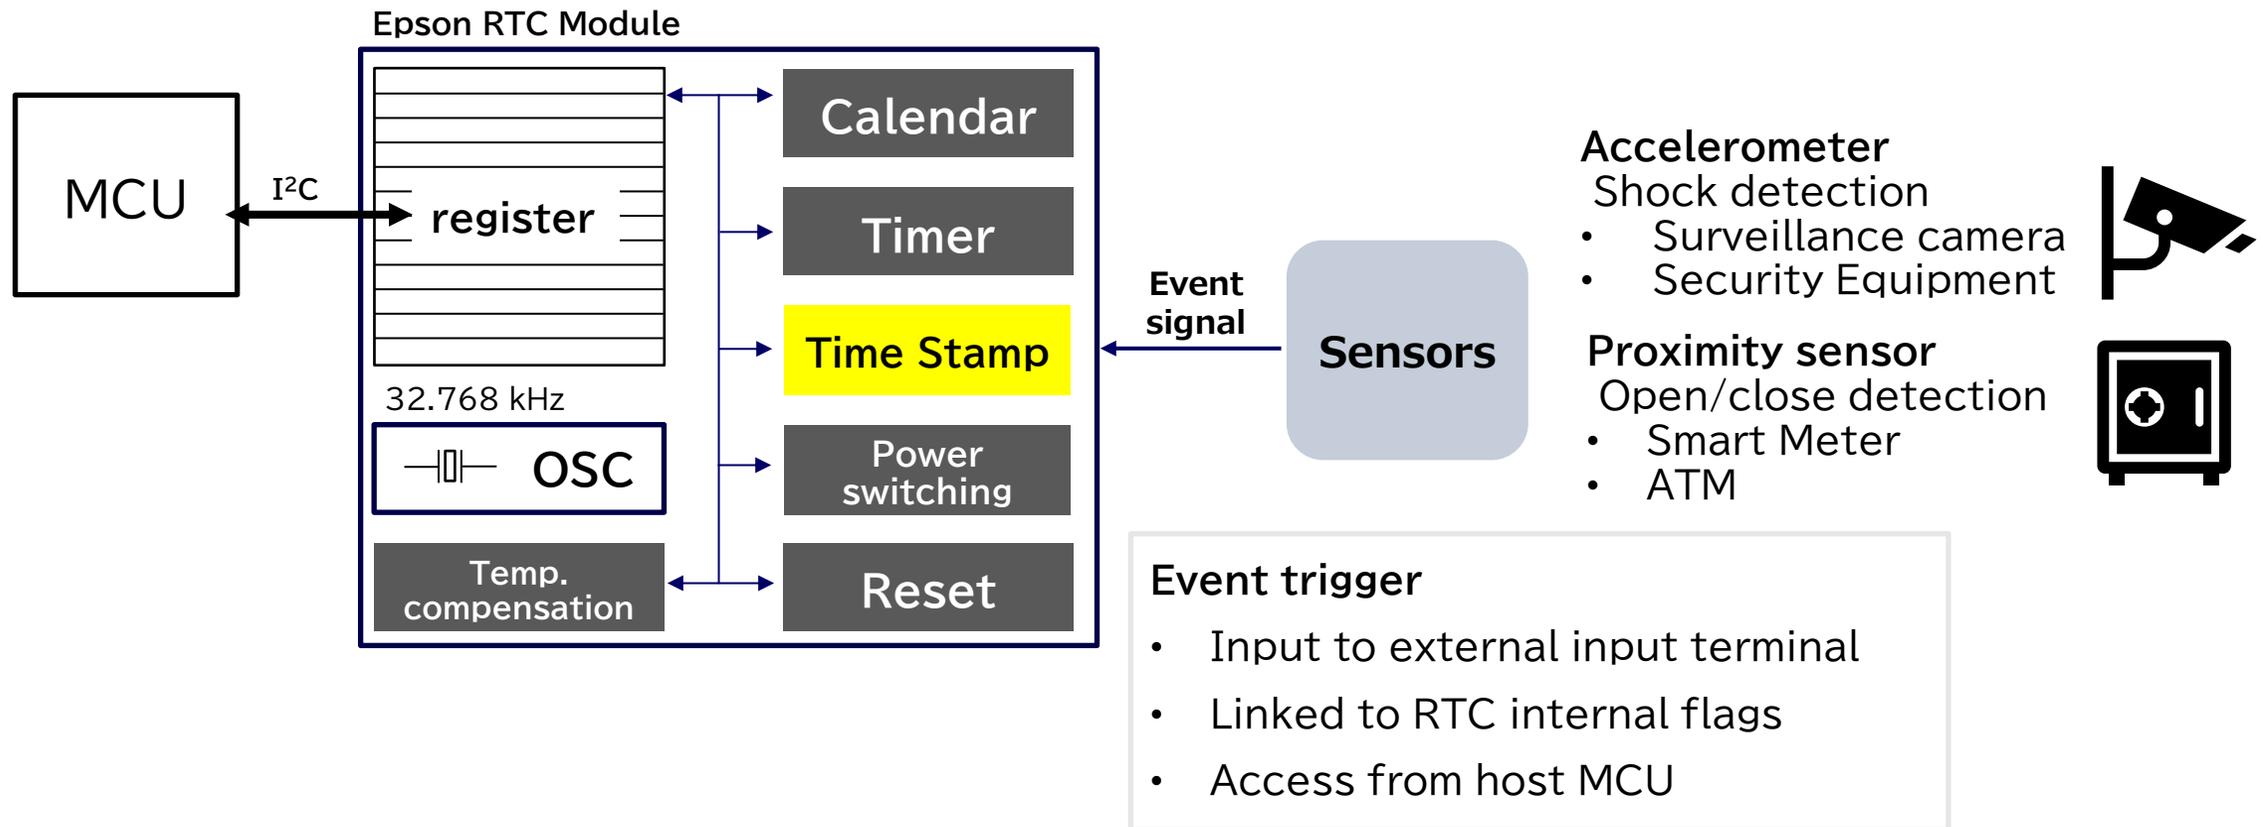

# Functions (3) Power switching

Monitors the main power supply and automatically switches to the backup power supply to continue operation when the main power supply voltage drops.

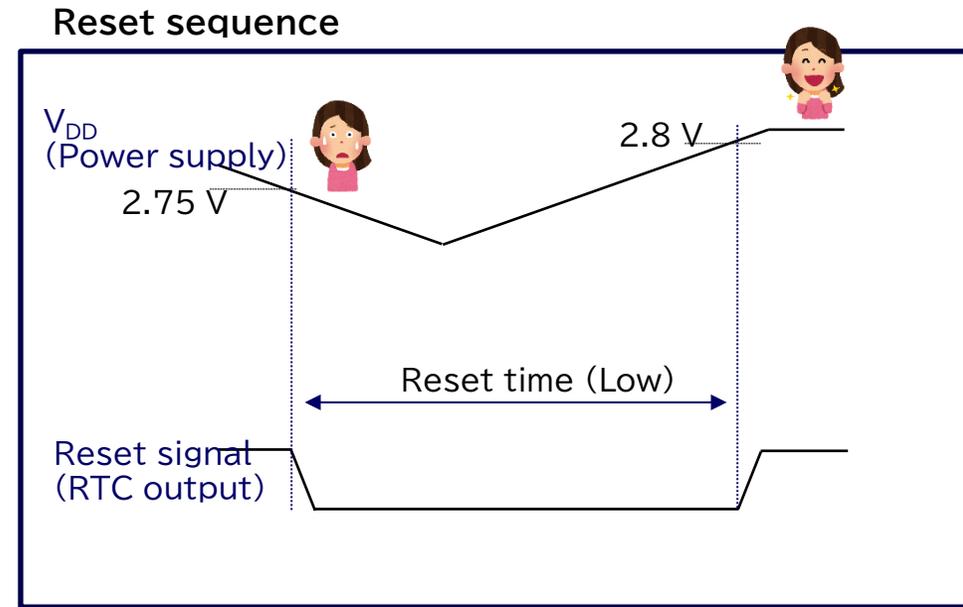

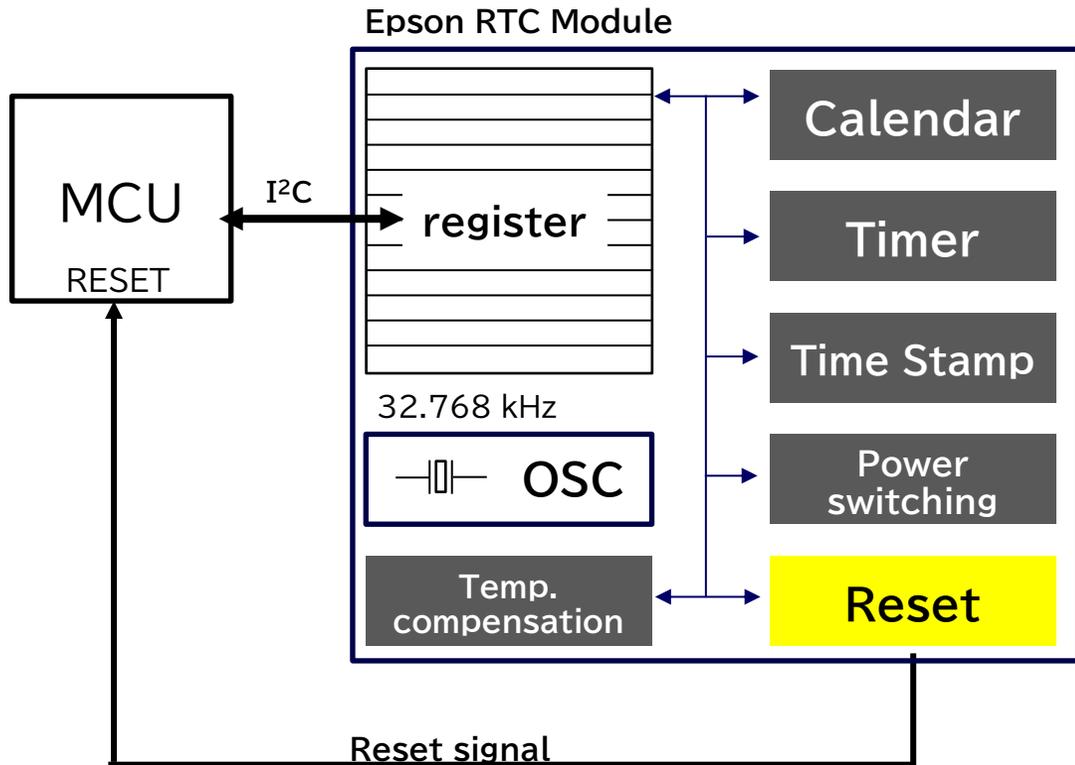

# Functions (4) Time stamp

- The time stamp function stores the time information when an event (signal) is detected.
- The RTC can record the date and time even when the MCU is inactive because the RTC receives signals directly.

# Functions (5) Reset output

- Detects a drop/rise in system power supply voltage and outputs a reset/reset release signal.
- Reduces the external reset IC, thus reducing the board space and number of parts

# Product Positioning

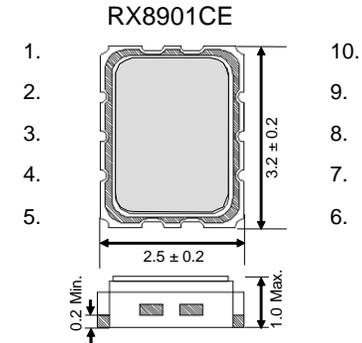

## ■ Main Features

- Built-in frequency adjusted 32.768 kHz crystal unit and **DTCXO**
- Interface Type :I2C-Bus
- Low backup current :**240 nA Typ.** / 3 V
- Auto power switching function :Automatically switches to backup power supply by monitoring the  $V_{DD}$  voltage
- Time stamp function : **32 time stamps Max.** (year to 1/1024sec)
- Interrupt output :Wake up every minute or every second
- Alarm interruption :Day, date, hour, minute, second
- Auto repeat wakeup timer interruption (24 bit x 1 ch.)
- Self-monitoring interruption :Crystal oscillation stop,  $V_{BAT}$  low,  $V_{DD}$  low

## ■ Specification

	Item	Symbol	Specs
Operating Conditions	Operating supply voltage	$V_{DD}$	1.6 V to 5.5 V
	$V_{DD}$ detect voltage	$-V_{DET1}$	1.35 V to 1.55 V ( $V_{DD}$ , Fall)
	Operating temperature	$T_a$	-40 °C to <b>+105 °C</b>
Characteristics	Frequency tolerance	$\Delta f/f$	XS $\pm 3 \times 10^{-6}$ (-40°C to +85 °C)
			XB $\pm 8 \times 10^{-6}$ (+85°C to +105 °C)
	Current consumption	$I_{BAT}$	240 nA / Typ. 3 V 1,500 nA / Max. 3 V

## ■ Pin & Function

Operating Conditions	Operating supply voltage	$V_{DD}$	1.6 V to 5.5 V
	Operating temperature	$T_a$	-40 °C to <b>+105 °C</b>
Characteristics	Frequency tolerance	$\Delta f/f$	XA $\pm 3.4 \times 10^{-6}$ (-40 °C to 85 °C) $\pm 8 \times 10^{-6}$ (-40 °C to 105 °C)
			XB $\pm 5 \times 10^{-6}$ (-40 °C to 85 °C) $\pm 8 \times 10^{-6}$ (-40 °C to 105 °C)
	Current consumption	$I_{DD2}$	350 nA / Typ. 3 V 1,500 nA / Max. 3 V (Temp. Compensation interval: 2.0 s)

## ■ Pin & Function

## ■ Block diagram

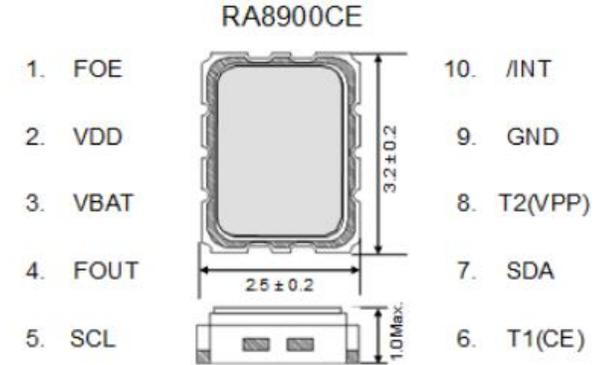

## ■ Main Features

- Built-in frequency adjusted 32.768 kHz crystal unit and **DTCXO**
- Interface Type :I2C-Bus
- Selectable clock output :32.768 kHz, 1024 Hz, 1 Hz
- Auto power switching function :Automatically switches to backup power supply by monitoring the  $V_{DD}$  voltage
- Interrupt output :Wake up every minute or every second
- Alarm interruption :Day, date, hour, minute
- Auto repeat wakeup timer interruption (12 bit x 1ch.)
- **AEC-Q100 compliant**

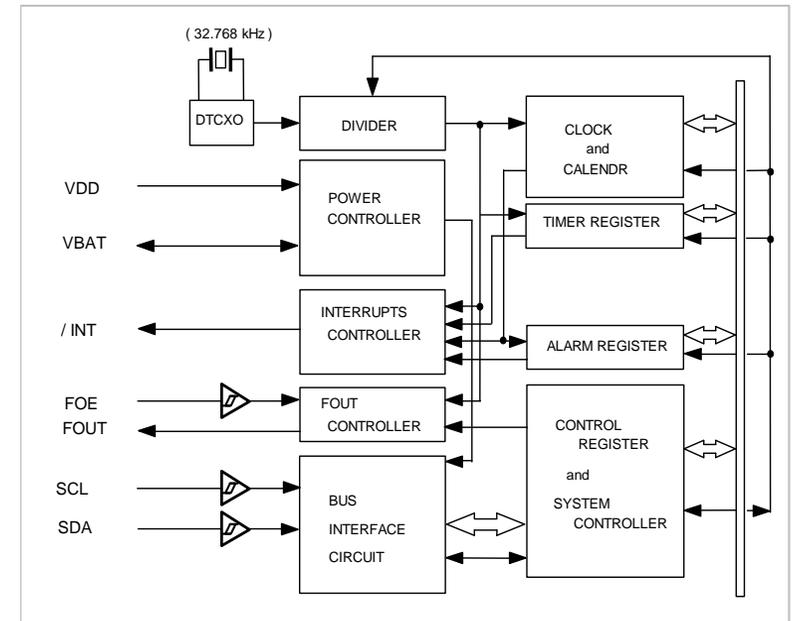

## ■ Specification

	Item	Symbol	Specs
Operating Conditions	Operating supply voltage	$V_{DD}$	2.5 V to 5.5 V
	$V_{DD}$ detect voltage	$V_{DET3}$	2.3 V to 2.5 V
	Operating temperature	$T_a$	-40 °C to +85 °C
Characteristics	Frequency tolerance	$\Delta f/f$ UA	$\pm 3.4 \times 10^{-6}$ (-40 °C to 85 °C)
		UB	$\pm 5 \times 10^{-6}$ (-40 °C to 85 °C)
	Current consumption	$I_{DD2}$	700 nA / Typ. 3 V 1,400 nA / Max. 3 V (Temp. Compensation interval: 2.0 s)

## ■ Pin & Function

If you're interested in use cases by function or application-specific examples, we have prepared some materials for you.

**Epson's RTC modules provide solutions for three major issues** EPSON

Epson's RTC module helps to solve issues below.

Technical challenge	Provided function	Overview
Extra time and procedures are required to reset the time information when the system is rebooting.	Power Self-m	The FA equipment with a backup battery will
Event detection and recording are required even when the system is stopped.	Time s	
Incorrect time caused by heat generated from FA equipment.	Built-i (Digital T Compens Oscillato)	

**Power switching function** EPSON

What is Power switching function  
RTC module detects a voltage drop in the main power supply and automatically switches to a backup power supply and continue to provide accurate time.

**2-2. Temperature compensation Use case : Infotainment** EPSON

Issues  
Vehicle clocks gradually lose time.  
Configuration example :  
MCU with a built-in RTC + 32-kHz xtal

MCU  
RTC  
32-kHz xtal

Tuning fork crystal frequency-temperature coefficient

The 32-kHz crystal unit has a quadratic frequency-temperature characteristic. Temperature fluctuations inside vehicles are large, resulting in frequency fluctuations and clock deviations.

Accuracy : Frequency deviation at room temperature + Frequency-temperature coefficient (Quadratic curve)  
Ex.) Operated continuously for one month

Environment	Monthly rate
+60° C	Equivalent to 1 min. 50 sec. / month
-10° C	Equivalent to 1 min. 50 sec. / month
-40° C	Equivalent to 6 min. / month

You can download all of these materials by requesting them.

**•Functions and Use Case examples**

This document introduces applications that can leverage RTC functionality, along with use cases addressing related challenges and solutions.

**•Solving Time Data Issue in FA Equipment**

Regarding the time data in FA devices: (1) It is difficult to determine whether the time needs resetting upon device startup. (2) Error signal detection and logging are required even when the system is stopped. (3) The time may deviate due to device heat generation. This material explains how to use the RTC module to address these three issues.

**•Solving Technical Issues in Security Cameras**

For security cameras, accurate date and time data must be maintained even in the event of a long power outage or network outage, and the occurrence history of high-priority event signals must be maintained even when power is lost. This material explains how to use RTC modules to solve the following three problems: (1) when installed outdoors, (2) the temperature changes rapidly, and (3) time accuracy cannot be maintained.
